NEWS RELEASE

St. Cloud, MN – Built as a close quarters battle rifle, the DPMS Personal Defense Weapon (the PDW) allows security contractors, Special Forces operators and SWAT team members to easily, and quickly, maneuver their way through the tightest environments imaginable. Fast target acquisition with the short 7" barrel, coupled with the compact, lightweight design of the rifle, allows operators to easily engage their target from security vehicles, narrow airplane aisles, or dark, dank hallways. Currently deployed worldwide, both as an entry weapon in the hands of SWAT team members on the streets of the United States and as a rifle of choice for a Middle Eastern Special Operations element protecting heads of state, the PDW has proven itself time and again as the go-to weapon in close quarter situations.

Chambered in 5.56 NATO, the DPMS Personal Defense Weapon (PDW) features a 7" chrome-moly barrel with a 1x9 twist, and an A2 Flash Hider. The 7075-T6 forged aluminum A3 flattop upper receiver, "T"-marked and complete with dust cover, forward assist, and shell deflector, feature the hard coat anodizing and Teflon coating customary to all DPMS rifles. Each rifle comes standard with a detachable carrying handle, which is easily removed to attach whatever optics the operator chooses to the Picatinny rail. The phosphated 8620 steel bolt carrier and steel bolt have been heat-treated and plated per Mil Spec and a custom length free float tube completes the upper assembly. Optics are not included with the rifle.

The semi-automatic, or optional select fire, lower assembly features a hard coat anodized and black Teflon coated, forged 7075-T6 aluminum lower receiver. A 6-position, telescoping, fiber-reinforced M4 stock and A2 Pistol Grip complete the compact, yet reliable rifle. Additional accessories include two (2) 30-rd magazines, a cleaning kit and hard case for storage. The rifle weighs 5.9 lbs when empty and the OAL adjusts from 27 1/2" with a fully extended buttstock to 23 3/4" when collapsed.
